Instructions: Answer **any** 3 questions.
All questions will be marked equally.

Duration	2 hours
No. of Pages	2
Discipline(s)	IT
Course Co-ordinator(s)	

Requirements: None

PTO

1.
 - a. Explain the steps involved in a browser requesting and displaying a simple HTML webpage. (5 marks)
 - b. Write HTML code that creates an ordered list of 7 elements representing the days of the week. (7 marks)
 - c. What are absolute and relative references (in relation to file names). (6 marks)
 - d. Write HTML code that creates a table showing Title, First name, Surname and Discipline of 4 staff members. (7 marks)
2.
 - a. What are the advantages of using server side includes (SSI)? (5 marks)
 - b. What differentiates a SSI file from a conventional HTML file? (5 marks)
 - c. How are Cascading Style Sheets (CSS) used to facilitate Web page design? (7 marks)
 - d. Using CSS styling set the background colour, font, colour and alignment of a paragraph – choose suitable values for each. (8 marks)
3.
 - a. Using JavaScript write an event handler that runs when the page loads. Your event should use a for loop to calculate the sum of the integers from 1 to 10 inclusive. This total should then be written to the webpage with an appropriate message. (10 marks)
 - b. Describe 5 different JavaScript events. (5 marks)
 - c. Write JavaScript code that will simulate a bar moving across the webpage. You can assume a picture of the bar is stored in the file bar.jpg. When the bar hits either edge of the page its direction should be reversed. (10 marks)
4.
 - a. In PHP what are the differences between the effects of single and double quotes? (5 marks)
 - b. Write PHP code that creates an array of 10 elements, and then calculates the sum of the elements of the array. (5 marks)
 - c. Explain the different ways that arrays be indexed in PHP? (5 marks)
 - d. Write HTML and PHP code that allows two numbers to be entered into 2 text boxes. The values entered should be passed to PHP code which then calculates the product of the two numbers. (10 marks)
