PTO

1.
 - a. How can forms be used to enter data into an HTML page? (5 marks)
 - b. Write the HTML code that creates a Drop Down List of 12 elements representing the months of the year. (7 marks)
 - c. What are the advantages of using relative references for files and images stored on the same server as the HTML page? (6 marks)
 - d. Write HTML code that creates a table showing the Name, Director and the DVD cover image of 5 films. (7 marks)
2.
 - a. How are SSI files incorporated into HTML files? Illustrate your answer with a simple example. (5 marks)
 - b. What are the advantages of using SSI files, rather than simple HTML files? (5 marks)
 - c. What are the 3 types of style sheets? Describe how the 3 types can all be used together. (7 marks)
 - d. How are colours represented in CSS? Give an example. (4 marks)
 - e. How can font families be used to set fonts on a webpage? Give an example of their use. (4 marks)
3.
 - a. Using Javascript write an event that runs when a button labelled “Run” is clicked. Your event should move the button 100 pixels to the right. (10 marks)
 - b. How can Javascript be used to perform client side validation? (5 marks)
 - c. Write Javascript code that reads 3 numbers from 3 text boxes and displays them in descending order. (10 marks)
4.
 - a. Describe the processes involved in loading a page that contains PHP. Your description should cover the steps from the user selecting the page to the page appearing on their browser. (5 marks)
 - b. Write the PHP code that creates an array of 20 elements, and then prints the array out twice – normally and in reverse order. (5 marks)
 - c. What are the two ways of passing data from a browser to an HTML file? (5 marks)
 - d. Write the HTML and PHP code that allows three strings to be entered into 3 text boxes. The values entered should be passed to PHP code which then prints out an HTML page that contains the longest of the 3 strings. (10 marks)
