Duration 2 hours
No. of Pages 2
Discipline(s) IT
Course Co-ordinator(s)

Requirements: None

PTO

1.
 - a. Describe 5 different tags that can be used on an HTML page. Illustrate each one with an example. (5 marks)
 - b. Write HTML code that creates an Ordered List of 12 elements representing the 12 months of the year (January, February, March, etc.). (7 marks)
 - c. How can Name Anchors be used on pages (e.g. FAQs). Illustrate your answer with an example. (6 marks)
 - d. Write HTML code that creates a table that represents Academic Disciplines (IT, French, etc.). There should be columns for Name, College, School, Head, and Contact details. The contact details should include an address, an email address and a phone number. The table should represent 3 disciplines. (7 marks)
2.
 - a. In CSS how can a single style be applied to all elements?. (5 marks)
 - b. How can SSI files be used to simplify PHP code? (5 marks)
 - c. Show how links can be styled in CSS. What are the 4 special selectors?. (7 marks)
 - d. How are colours represented in CSS? Give examples of both forms that can be used in CSS. (4 marks)
 - e. Describe the Box Model in CSS, highlight the 4 parts of it. (4 marks)
3.
 - a. Using Javascript write an event that runs when a button labelled "Run" is clicked. Your event should display an image on the webpage that moves 10 px to the right every 30 seconds. (10 marks)
 - b. Describe 4 Javascript methods that can be used to perform client side validation. (5 marks)
 - c. Write Javascript code that reads 3 numbers from 3 text boxes. If each of the numbers is less than 10 it should display the sum of the numbers, else it should print an error message. (10 marks)
4.
 - a. Give an example of PHP performing server side validation. (5 marks)
 - b. Write PHP code that creates a session variable that saves the name of the user. (5 marks)
 - c. What are the differences between using GET and POST in PHP? (5 marks)
 - d. Write HTML and PHP code that counts the number of times a user makes a request (you don't need to write the code for the details of the request). If it doesn't exist a cookie should be created. If it does exist, 1 should be added to the value of the cookie. If the value of the cookie is 5, a message should be displayed saying that the maximum number of requests has been exceeded. The cookie should be kept for 24 hours – effectively limiting the user to 5 requests a day. (10 marks)
